

ENTHUSIASM, CREATIVITY, JOY

We enthusiastically welcome the challenge of global competition as we can rely on the certainty of our know-how and on the power of OTLAV automation. Now inventing, creating, producing and selling are the joyful principles that stem from our new powerful position.

Fabio Padovan

OTLAV S.p.A produces and sells hinges for doors and windows and other accessories for frames.

Founded in 1956 by entrepreneur Angelo Padovan, Otlav has produced more than 2,2 billion of hinges since 1956.

With more than 100 registered patents, Otlav ensures high quality standards and **is present with its wide range of products in over 80 countries worldwide.**

In 2007 the current production site was inaugurated in Santa Lucia di Piave, built with excellent technologies and cutting-edge operational tools. It's a jewel of automation and allows to reduce the management and production costs, reason why it is frequently visited by technicians from all over the world.

Basing on these investments Otlav has intensified its two main features:

- Continued investment in cutting-edge technology and production machinery.
- Complete autonomy and self-responsibility in the whole production chain, which is property of Otlav.

"OAMH" "Otlav Automatic Material Handling" is a project developed after five years of research and studies all around the world; a technological jewel created by designing at first the best logistical location, and then a subsequent lay out, and eventually the container to cover these structures: an unmistakable technological masterpiece, which is 20 meters high.

Rationalization of space, optimization of logistics and exploitation of integrated automation: all of these account for respectively the flow or transportation of materials and the streaming of information.

The goal is to cut costs by rendering the hinges increasingly competitive with an unparalleled level of quality.

The means through which this goal is achieved is by the implementation of a complex automated system from the instant when the raw material enters the factory to the exit of the finished product, without any sort of interference from the outside.

For the transportation of all necessary material, "OAMH" makes use of special automatic trolleys designed and built specifically for OTLAV, called **LGV (Laser Guided Vehicle)**. These trolleys transport and distribute the necessary materials to individual machinery for seamless working in a completely automatic way. Speed, safety and precision.

CATALOGUE

CODE STRUCTURE

We have compiled this list in order to help our customers as much as possible when they are making out their orders, to eliminate the possibility of mistakes and subsequently, to shorten the delivery times of our products.

The codes of all the articles available in the OTLAV warehouse are listed clearly and precisely and each code refers to a single article.

For example, there is a code for the complete hinge (code CI), the male part (code CG) and the female part (code CF), or the hinge cap (code GC). In each case, the product is described in detail, with code, type, finishing, packaging and price.

The price is given in Euros and the price in bold type is the sum of the prices that make up a hinge, i.e. the price of the male part (code CG) plus the price of the female part (code CF), or the price of a complete hinge (code CI).

Important: We recommend you to pay the utmost attention when using this List, especially in the initial stages, because **ONLY COMPLETE, EXACT CODES ARE CONSIDERED VALID**, in order to avoid regrettable hitches.

This price list can undergo products and prices modifications without notice, for updating refer exclusively to the online price list published on website www.otlav.com.

Further information regarding OTLAV products, such as quality reports, tests and others, is available on the website: www.otlav.com.

AA BBB CCC DD EE

The ordering code has been prepared using the following method:

AA = GROUP

AI = door alignment device,
CE = bush,
CF = female part,
CG = male part,
CI = complete hinge,
CR = pintle,
FP = pivot,
GC = cap,
IN = concealed hinge,
JC JR = fixing plate,
LC = flushbolts,
MA = complete tools box,
MC = jig,
NP = plate,
NT = bolt hinge,
RO = washer,
TE = head,
TO = hole cover,
TP = door closer.

BBB = MODEL

CCC = DIAMETER or REFERENCE SIZE (hinges = diameter; bolts = length). For tools, it indicates the diameter of the article for which they have been made. It is specified in teens of millimeter: for example Ø13 = 130.

DD = SURFACE FINISHING of the particular product.

EE = PROCEEDING NUMBER which identify the article.

NB: OTLAV may not be held responsible for any errors that occur due to an incomplete, absent or incorrect article code during the dispatching of orders.

OTLAV TESTS

Hinge carrying capacity

As required by European regulations and by Regulation (EU) No. 305/2011 **all OTLAV hinges are subjected to stringent resistance tests to check performance both during the design phase and regularly during manufacturing.**

The I.U.S. (Intensive Use Simulator) is the testing system used in the OTLAV Test Laboratories.

It consists of a rigid structure made up of uprights and crosspieces to which the door or window being tested is fixed and by integrated automated systems that simulate the movement of the door/window during normal use. The special configuration of the I.U.S. faithfully reproduces the fixing of the door/window to the support it is intended for. It is also able to recreate extreme situations helping to considerably increase safety margins.

The hinges are subjected to different types of tests as envisaged by the harmonized standard UNI EN 1935/2004 and by standard 14648/2008:

- Test for resistance to wear.
- Test for loading and overloading.
- Test for resistance to extraction (of the pin from the support to which it has been fixed).
- Test for resistance to torsion.
- Test for resistance to bending.
- Test for resistance to mishandling such as breaking down the door (British Standard Institute, PAS 23/1,1999) and RAL tests.

A number of digital and analogue measuring instruments assembled on the I.U.S and connected to computerized data capturing devices, measure in real time the following significant values during the tests: deformation, movements, load capacity variations, number of cycles.

Constant visual and acoustic checks are also carried out to detect any anomalies not registered by the instruments, for example such as powder due to mechanical wear or creaking. The I.U.S. can test windows or doors up to 250x150 cm and weighing more than 250 Kg.

EC Certificates and Performance Declarations

Tests on the hinges are also carried out at external bodies able to certify that the company manufactures according to rigid, systematically monitored production plans and that the products pass the tests envisaged by the standard UNI EN 1935:2004 they are thereby able to issue, if needed, the EC certificate or certify the data provided by OTLAV in the "performance declarations".

OTLAV TESTS

Hinge carrying capacity

Sixty years of technical experience in door and window hinges is a remarkable achievement, but the day-to-day challenge is the constant search for new findings demonstrating improvements in performance, safety and appearance.

Resistance, carrying capacity and reliability contained in a harmonious design, even if concealed, are the achievements reached and maintained over time by all the OTLAV models.

The hinge, initially comprised of a body and a threaded pin welded together to form the male and female parts, has been improved over time through different models with plates, pins and screws leading to **highly sophisticated models adjustable on 3 axes**. The study of new materials has ensured that hinges' only original weakness: the welding point, has been overcome. Now thanks to constant research and checks over manufacturing, we have developed hinges which can support more than the maximum capacity indicated by the Standard UNI EN 1935:2002:

- 200,000 cycles (opening and closing);
- door mass of 160 kg;
- overload stress for safety levels up to 480 kg. on door systems.

When a hinge offers enormous potential, the choice of the model and number of hinges used must be evaluated considering other factors which improve conditions of use in addition to the indications in the Standard UNI EN 1935:2002 which suggests a minimum of 3 hinges for each door based on its mass.

The dimensions of the door/window, material used, thickness and anchorage points subject to requirements are all exclusive choices of our customers based on their experience. The performance levels declared by OTLAV provide good information to identify the hinges based on both the conditions of use and of the location of the door/window (public or private places, schools or offices, hotels or homes etc.) and the levels of care during use.

NOTE

The weight of the door/window which can be supported by a hinge depends on many factors:

1. dimensions of the shutter;
2. number of hinges;
3. positioning of the hinges;
4. type and quality of material used for the door/window;
5. accuracy, precision and experience when mounting the door/window to ensure the hinges are perfectly aligned;
6. distance of the male part from the frame must not be more than 6 mm;
7. thickness of the door/window material at the anchorage point.

Our technicians are available for support and any clarification required.

LOAD CAPACITY TABLE

Hinges for doors up to 80 kg. - door mass class 4

Door height mm.	400	400	400	400	400	400	400	400	400	400	400	400	400
	400	600	800	900	1000	1050	1100	1150	1200	1250	1300		
2400	4	4	4	4	4	5	5	5	5	5	3	3	3
2300	3	3	3	4	4	5	5	5	5	3	3	3	3

400	3	3	3	3	3	3	3	3	3	3	3	3	3

Door width mm.

X Suggested number of hinges

3 Switch to a hinge of one higher class, use 3 hinges.

3 Switch to a hinge of two higher class, use 3 hinges.

Tables showing the number of hinges to use depending on the hinge model, the width and height of the door/window, can be accessed in our website:
www.otlav.com

OTLAV TESTS

How to read the labels

Example of a label placed on a box of Otlav products.

- 1) Product code.
- 2) Product description.
- 3) Number of pieces contained in the box.
- 4) Weight of box.
- 5) References to standards, accredited institution and EC certificate number.
- 6) 8-digit coding system on performance.**
- 7) Concise drawing of the product.
- 8) Manufacturing batch

To aid understanding of the performance requirements shown in the labels on OTLAV products, as per Standard UNI EN 1935:2002, we have provided below a summary of the evaluation criteria shown in the 8-digit coding system (see point 6 of the label above):

4	7	5	1	1	5	0	12
digit 1	digit 2	digit 3	digit 4	digit 5	digit 6	digit 7	digit 8

Digit 1 - Category of use.

- Grade 1 - light use: hinges used on doors or windows in homes or in other residential areas and in buildings where there is a low frequency of use by people highly incentivized to take care and with a low probability of accidents or incorrect use.
- Grade 2 - medium use: hinges used on doors in homes or in other residential areas and other buildings where there is an average frequency of use by people fairly incentivized to take care and with a slight probability of accidents or incorrect use.
- Grade 3 - heavy use: hinges used on doors in buildings where there is a high frequency of use by the public or by other people with little incentive to take care and with a high probability of accidents or incorrect use.
- Grade 4 - severe use (digit 8: grades 12, 13 and 14): hinges used on doors subjected to frequent and violent use.

Testing methods.

The tests to evaluate the required performance levels have been carried out on two hinges fixed to rigid testing equipment or a single hinge subjected to vertical load testing.

Digit 2 - Durability.

Grade 3 = 10,000 cycles

Grade 4 = 25,000 cycles

Grade 7 = 200,000 cycles

The hinged item is rotated, simulating opening and

closing of the door by 90 degrees for the number of cycles required by the grade being tested. Via this test, it is verified that by the end of the test, the wear of the hinge does not damage the functionality of the hinge. At the end of the test, the vertical and horizontal deviations of the door must remain within the required limits.

Digit 3 - Door mass.

It's the weight of the door on which the hinge to be tested is mounted.

- Grade 0: 10 kg
- Grade 1: 20 kg
- Grade 2: 40 kg
- Grade 3: 60 kg
- Grade 4: 80 kg
- Grade 5: 100 kg
- Grade 6: 120 kg
- Grade 7: 160 kg

Digit 4 - Suitability for use on fire rated or smoke rated doors.

Grade 0: no.

Grade 1: yes.

The door is tested to determine if the material is able to endure fire (see Appendix B of Standard EN 1935:2002 for the additional requirements).

Digit 5 - Safety.

Grade 1: the hinge satisfies the essential requirements of safety in use.

Load deformation test: a load equal to the door mass is applied: the deformations recorded during and after the load must remain within certain specified limits and there must be no change in the functional performance. Incorrect use of a door over a short time period is reproduced via this test.

Overload test: a load twice the door mass being tested is applied: the hinges and the door must not present any deformation or breakage and the door must not drop even if the hinge no longer works. An exceptionally negative event is reproduced via this test.

Shear load test: this test is carried out separately on a three pins hinge (not mounted on a door). The central part of the hinge (bushing) is loaded with a predetermined weight as per a table. This test is made to verify that the central pin does not sustain any deformations which can damage the functionality of the hinge.

Digit 6 - Corrosion resistance.

The level of corrosion resistance is defined via a salt spray test according to Standard ISO 9227 and evaluated according to Standard EN 1670. The Salt Spray test is carried out on samples corroded by a saline solution in a special test cabinet. The time necessary for the onset of oxidation establishes the grade of resistance from 0 to 5. See following pages.

Digit 7 - Resistance to burglary.

Grade 0: No.

Grade 1: Yes. Hinges are suitable for use on doors requiring a degree of security.

Digit 8 - Hinge grade.

Overall rating for the hinge (in ascending order from 1 to 14).

OTLAV TESTS

Resistance of finishing

Formation of rust on steel is a natural and inevitable chemical phenomenon which occurs regardless of the location and the conditions. The longer the start is delayed, the more the functionality and appearance of the door/window is guaranteed.

The propensity of steel to corrode can be reduced by adopting measures to protect it, based on external coatings or finishing which tend to isolate it from aggressive atmospheric conditions.

Correct use of a hinge must therefore take into account the location in which it will be used and resistance of the finishing to rusting. When using hinges in a protected environment or in mild and stable environmental conditions it is possible to choose from a wide range of finishing. When using hinges in an aggressive environment we recommend choosing from those with corrosion resistant finishing used together with OTLAV caps.

At Myrtus, the galvanic treatment company of OTLAV Group, all the finishes are subjected to a specific resistance test.

The salt spray test, carried out according to the UNI regulations detailed below, is an accelerated corrosion test which enables the resistance to corrosion of a material or a coating to be evaluated qualitatively. The sample to be examined is placed inside a test chamber at a constant temperature, humidity and pressure: inside the chamber a saline solution is atomized which then attacks the protective coating of the hinge. At predetermined intervals the samples are observed and any changes are registered up until the appearance of traces of oxidation or spots of red rust.

There is no direct relation between the resistance to salt spray and the life of hinges exposed to atmospheric agents in different environments: therefore this test must be considered as a comparative or indicative method of relative quality (not an absolute figure).

OTLAV is also environmental friendly oriented having the **"Infinitely Recyclable"** certification (Myrtus was the first company in Italy to obtain the certification), which acknowledges metal products which can be smelted and recreated an infinite number of times, without giving rise to waste products or other harmful elements for the ecosystem.

Salt spray chamber:

Angelantoni ACS mod. DCTC600

Test carried out according to regulations:

UNI-ISO 9227 type NSS SS DIN 50021 ASTM B 117
SIS 184190 NFX 41-002

Salt concentration:

5% +/- 0,5%

Collected volume:

1,5 cc hour - Mass 1033 Kg/m³ - pH 6,9

Chamber temperature:

35 °C +/- 1°C

Pressure:

1,5 bar

Samples are arranged in a radial pattern on the test specimen holder

Salt spray chamber: Angelantoni ACS mod. DCTC600.

NOTE!

Especially hostile areas and agents and inappropriate conduct can accelerate the decline of steel even if treated:

- 1) salts or acids and other oxidizing agents present in the air and especially concentrated in marine areas, in livestock shelters and in urban areas are aggressive factors;
- 2) the same degree of corrosion can be found in rooms or work sites poorly ventilated, in which chemical treatments such as painting or finishing of floors have been carried out;
- 3) high humidity and repeated temperature changes typical of rooms or places not lived in are a certain cause of the onset of oxidation;
- 4) incorrect storage, handling without care or cleaning of the product with corrosive or abrasive products can damage the aesthetic and structural integrity of the product even before mounting it.

FINISHING

Finishing Description

CLASS*

Finishing with high resistance to corrosion (class 5)

* Resistance class

The destined use indicated in the table refers to the grade of resistance to corrosion in salt spray (NSS type) as envisaged by standard UNI EN 1670 2007 (sixth figure according to UNI EN 1935).

Resistance class	Description	Life
0	Resistance to corrosion not defined.	<24h
1	Low resistance to corrosion, use in internal dry environments (i.e. internal doors to living areas).	24h
2	Moderate resistance to corrosion, use in internal areas that may have humidity (i.e. internal doors in basements or bathrooms).	48h
3	High resistance to corrosion, use in external protected areas (i.e. protected main external doors).	96h
4	Very high resistance to corrosion, use in external areas (i.e. unprotected main external doors).	240h
5	Exceptional resistance to corrosion, use in external areas with corrosive environmental conditions (i.e. external doors/windows in maritime areas or livestock shelters).	>480h

A close-up, high-angle photograph of a vast stack of brass hinge pins. The pins are cylindrical and have a distinct dimpled or faceted top surface. They are packed closely together, creating a rhythmic pattern of light and shadow across their surfaces. The lighting is bright, highlighting the metallic texture and the geometric shapes of the pins.

NORDEX 484

Nordex is a very popular hinge in Northern European countries; it is characterized by its reliability and the ease with which it is possible to adjust the leaf of a flush door or window, following a simple sequence on mounting. In addition, the effectiveness of the carrying capacity is guaranteed by the huge amount of fixing points in each plate.

488 Ø16 SELF-CLOSING

Developed to combine perfectly with the technology of the Exacta hinge, this hinge ensures that the door on which it is mounted closes automatically. The force of the closure can be easily adjusted and it is a particularly advantageous solution for large scale applications.

For doors weighing up to 40 Kg., the fitting of a traditional EXACTA hinge in the middle and two 488 SELF-CLOSING hinges at the ends of the door is recommended; whereas for doors weighing between 40 and 60 Kg. it is advisable to fit two traditional EXACTA hinges at the ends of the door and two 488 SELF-CLOSING hinges in the middle.

1. By acting on the threaded pin it is possible to quickly fit the hinge using the appropriate hexagonal bit for electrical drill screwers and then make the side precision adjustment using the special "T" wrench.

2/3. The force of the automatic closing, which also depends on the weight and size of the door, can easily be adjusted by varying the position of the special adjusting screw.

This operation is clearly illustrated in the mounting diagram supplied with the hinges.

EXACTA 495

PRECISION AND RELIABILITY WITH NO COMPROMISES

By using a "T" wrench it is possible to adjust the height of the pivot, therefore raising the female part. The weight of the door is evenly distributed over all the door-frame hinges thanks to the great sensitivity of the height adjusting device.

Designed to combine the perfection of three-dimensional fixture adjustment with an easy and, above all, reliable system, **Exacta** epitomizes the essence of OTLAV functionality.

The practical aspects of **Exacta** are built into each component of the hinge.

Every part that makes up this sophisticated adjustment system has been meticulously designed and only the best materials are used after having passed strict inspection tests.

A wide range of brass, steel and ABS caps means that doors and windows can now be given a personal touch of style.

Exacta's precision, reliability and practicality are all concepts that perfectly reflect the OTLAV style, which has always been geared towards continually advancing its product technology.

EXACTA TRIANT 495

Exacta Triant has been designed to be installed on the third shutter and on heavy flush doors. The design is particularly linear and elegant, the application enhances the overall prestige of the door or window. Exacta Triant is equipped with 3D adjustments and can be covered with caps in different colours.

WOOD

By using a "T" wrench it is possible to adjust the height of the pivot, therefore raising the female part. The weight of the door is evenly distributed over all the door-frame hinges thanks to the great sensitivity of the height adjusting device.

By acting on the threaded pin it is possible to quickly fit the hinge using the appropriate hexagonal bit for electrical drill screwers and then make the side precision adjustment using the special "T" wrench. The wide, self-threading pitch not only means that assembling time is greatly reduced.

EXACTA TRIANT 495 Ø14

URSUS 495

495 Ursus Adjustable hinge specific for massive, therefore **heavy doors** with particularly wide shutters.

Perfect alignment of the hinge, thanks to the three pins on the male part, that maintain in time the original vertical order of the hinge.

495 Ursus with 5 pins is available in diameter 14, 16 and 18 mm. Ursus hinge Ø14, which can be used with the female part Exacta 495 Ø14, is normally available in the 6 pins version (3 pins on the female and 3 on the male part). Hinge Ursus Ø18 is available, on demand, also in the 6 pins version.

ALMAX 499

This high quality hinge, as well as being adjustable in three directions, also has a lifting action: **whilst the door is being opened, it lifts up by 5 mm.** It is therefore particularly suitable for wide and heavy doors and old uneven floors or for going over carpets and rugs, fully demonstrating its qualities of efficiency and precision.

ADJUSTMENTS

- Height
- Side
- Depth

1/2/3 - Acting on the upper part of the hinge, the female part, it is possible to change the direction of the hinge, from right to left and vice versa. It is sufficient to lift a few millimeters the movable part of the female hinge and rotate 180° to obtain a right or a left hinge.

SIKURKARDIN Q75

Laying times facilitated and cut down by 30%.

Hygiene and cleanliness: no more spatula job. No direct contact with chemical anchoring elements, dangerous for health. It is revolutionary from the point of view of cleanliness, of accuracy and above all of safety. In fact, it cuts down to zero any contact with bi-component resins which are usually employed in assembling hinges.

The operation is absolutely accurate, since it allows you to introduce the right dose of anchoring element, which does not therefore overflow from the insertion hole. With a few simple operations, you can obtain perfect fixing without any fastening resins coming out.

1. SikurKardin guarantees that you **save time and money**, thanks to perfect dosing of the chemical anchoring element. **The health of the operator is safeguarded**, since he does not come into direct contact with the chemical anchoring element.

2/3. It is safe because the pin, once fitted in, is locked in place by a through plug which incorporates it into the body of the hinge. Therefore, **no more shutters which fall** after a few years, with heavy consequences in terms of civil and criminal liability for the installers.

It is **also anti-intrusion**, since the pin cannot be pulled off, nor can the shutters be pulled off when they are shut.

Q75 Ø20 SIKURKARDIN

Kit containing one injection pintle Ø12x140, one pivot 12x30, one plug and one hole cover

FIDEX KARDIN Q82

Equipped with
anti-unthreading
mechanical
holding

Thanks to the anti-unthreading mechanical holding,
**Fidex- Kardin is the best solution to fulfill safety
needs and high quality home building standards.**

- 1) The **T shaped pintle** allows anti-unthreading of the shutters even in case of extreme weather conditions. The hexagonal cross-section of the pivot is perfectly coupled with the housing of pintle, avoiding in this way any kind of friction between the two bodies.
- 2) The **threaded insertion pin** allows easy and safe wall clamping.
- 3) The drive on the female bottom guarantees the pivot anti-unthreading.
- 4) To guarantee maximum security is required to put threadlocker resin on the threaded pivot hole.

OPTIONAL

One way security screws
that are fastened with a regular screw driver, but cannot be removed because of the curved surfaces on the screw head, allowing in this way anti burglary.

MODULAR ROD

ACCURACY, SPEED AND FLEXIBILITY

Unlike the standard hinge drilling systems, with MODULAR ROD, thanks to the device which can lodge two or three special tools that permit the separate door and frame drilling for the subsequent hinge fitting, it is not necessary to place the door on the frame; so that it is possible to prepare two separate lines to produce the doors, **that is to say one for producing the shutters and one for the frames.**

The **special symmetric shape** of the jig and the

reversible stop ensure the same rod can be used both for **doors and frames whether left or right.**

The use of the shims finally permits to adapt the jigs in case it would be necessary to increase or decrease the drilling distances respect to door or frame.

The MODULAR rod jigs are customized according to the kind of frame, to the type of hinge, to the position and angle of the pins as to the door or frame.

1 • The modular construction permits to use the same jigs, by replacing only the blocks, to fix different kinds of Otlav hinges.

2 • The millimetric rod allows the correct positioning of the jigs on the frames and on the doors.

3 • Duly adjusted, the reversible stop permits to position the rod always with a micrometric precision, in different times both on the frames and on the doors.

4 • The first, easy action to drill the frame, is the correct reversible stop Positioning on the frame reference.

5 • Successively proceed by drilling the frame.

6 • As for the door the process is the same, the correct reversible stop Positioning on the door reference, is the first operation to be done while drilling.

7 • It is then easy to proceed by fitting both the male and the female parts.

MODULAR ROD

CODE	DESCRIPTION	PCS	PRICE PER PIECE
MU8XXXXXXXXX	Customized jig for installation of OTLAV hinges equipped with: millimeter rod, reversible stop, 3 drilling jigs and if needed shims PP160020ZN04. For inquiries you are requested to forward the dimensioned technical drawing of shutter and frame as per sketch here below.	1	On demand

A: Light between frame and door.

B: First interior frame rabbet.

C: Overlapping shim between door and frame.

D: Overlapping between door and frame.

E: Drilling angle for female pin.

F: Axis position male hinge referred to rabbet.

G: Axis position female hinge referred to door surface.

GENERAL CONDITIONS OF SALE

(In this text, the CLIENT is referred to as the "customer").

1) ORDERS

All orders transmitted by the customer are only binding for OTLAV after written acceptance by Head Office. OTLAV reserves the right not to deliver the order in the event that, from the time the order is accepted to the time the goods are due to be dispatched, there are any increases in cost or variations to the price list, or if the customer does not pay, for whatever reason, for previous deliveries of goods. In any case, OTLAV reserves the right to deal with the order in part, if it is unable to fulfil it completely due to circumstances beyond their control. Any remaining part of the order will be sent as soon as they become available, or with the customer's next order. **OTLAV is not responsible for any errors in supplying orders due to the Article Code Number being incomplete, missing or wrong.**

2) SAMPLES

The samples, catalogues and any technical documentation in the customer's possession, inasmuch as they refer to particular manufacturing techniques, have an indicative/demonstrative value. For the production of special orders or for articles which differ from standard OTLAV production, the technical design with an indication of quotes, or a sample, is required. OTLAV reserves the right to make any technical or manufacturing modifications they deem suitable at any time (without being obliged to inform the customer), to change the samples, catalogues and any other technical documentation in circulation.

3) PRICES

The prices stated in the price list are given in EURO, without VAT, and may undergo changes due to sudden variations in costs.

4) COMPLAINTS

Upon receiving the products, the customer shall immediately check the condition of the products and that they conform to the order. All complaints relating to the conformity of the products to the order, and regarding the quantity and/or the exterior condition of the product, must be made in writing upon receipt of the goods and **communicated to OTLAV, within and no later than 8 (eight) days of receipt.**

OTLAV will not be held responsible, in any case, for any damage to the surface caused by faulty storage of the products (damp or saline surroundings, etc.).

5) TRANSPORTATION

Deliveries, unless agreed differently, shall be carried out via transporters as defined by OTLAV. The goods, however, always travel **on behalf of the customer and at the customer's risk.** OTLAV accepts no responsibility for delays, tampering or any other shortcomings which occur during transportation. All responsibility by OTLAV ceases at the moment of delivery of the goods to the carrier. If the transportation is to be charged to the customer, the costs shall be added to the invoice for the goods.

6) PACKAGING

The original packaging is included in the price. The goods are delivered with OTLAV **packaging and in the minimum standard packaging stated in the catalogue.** Should the customer require different packaging, OTLAV reserves the right to debit the greater cost. OTLAV **shall proceed, at its own discretion and without notification, to increase the order to the quantity of the packaging** or to debit any increase.

7) CARRIAGE

The period allowed for carriage shall be agreed at the start of the business relationship; in any case, carriage via fast carriers or with urgent procedures requested by the customer, shall be debited.

8) DELIVERY DATES

Delivery dates are intended to be approximate and not peremptory; the customer has no right, in any case, to refuse the goods, or to request the termination of the contract, or compensation for damages for any delays.

9) RETURNS

Whereas any returns shall only be accepted if notified by letter, fax or e-mail within eight days of receipt of the materials, any right to return the goods shall lapse **once said period of time is up, and any returns must be authorized in writing by OTLAV.** Any returned goods shall be delivered to the OTLAV warehouse carriage free and with packaging intact, accompanied by relevant document on which the essential elements of the invoice relating to each individual product shall be clearly shown. Any returns delivered to OTLAV which are found to be tampered with or wrongly used, shall in no case be replaced or reimbursed; they shall be sent back freight collect to the customer. Neither shall any returns involving special articles, articles which are no longer in production, or faulty or rejected goods for reasons not attributable to OTLAV, be accepted.

10) PAYMENT

Payment of the price of the products and of the relevant delivery charges shall be in compliance with the terms agreed at the time of ordering. In the event of delayed payment, the default interest pursuant to Legislative Decree 231/02 with the increase pursuant to art. 5, shall be debited to the customer.

Should the customer find him/herself in a situation of insolvency or of bankruptcy proceedings, OTLAV may suspend or cancel orders and/or deliveries. The customer shall not have the right to delay or refuse payment in the event of any dispute. Cheques must made payable to OTLAV, and must not be transferable.

Payment in advance must be made with Swift transfer; orders with this type of payment shall only be considered confirmed and **production started, upon receipt of said transfer.** Payment C.O.D. shall be via bank draft made out to OTLAV, not transferable.

11) RESERVATION OF TITLE

All ordered products shall be sold with reservation of title by OTLAV until the price is paid in full. Therefore, until such time as payment has been made, the customer may not install, nor loan, or allow to be seized or distrained without declaring the property of OTLAV (notifying the latter immediately), the penalty being, in the event of violation of even one of the aforementioned obligations, forfeiture of the benefit of deferred terms. Until full payment of the price has been made, employees of OTLAV shall have the right to access the premises in which the products are being kept, in order to make the appropriate checks.

12) COMPETENT COURT

This deed is subject to Italian Law. The competent Court shall be the Court of **Treviso or Conegliano (TV)** only, for any dispute between the parties with regard to the interpretation, execution and termination of this deed and for any reason concerning credits and debits, without prejudice to the right by OTLAV alone to choose any other competent court pursuant to legislation.

13) EXCEPTIONS TO THE CONDITIONS OF THE CONTRACT

These general conditions of sale cancel all previous conditions and no exceptions shall be allowed unless expressly accepted by OTLAV.
